

Career Compass 2025

– Explore Your Future Path

Presented : Moon Nguyen & Trung Kien Vo

Introduction

What Is Career Compass?

Career Compass is an interactive web application that helps users explore careers based on their personality, skills, interests, and values. It simplifies career planning through a guided, user-friendly experience.

Why This Project Matters

Many young people feel overwhelmed when making career choices. Existing tools often lack personalization. This project aims to offer clear, tailored support for Gen Z and early-career individuals.

What It Offers

The platform includes a quick assessment, personalized job suggestions, and practical career tips—designed to help users understand their strengths and take confident steps toward their future.

Problem Statement

01

Lack of Clarity

Many young people are unsure about what careers are available, what specific roles involve, and how to choose a direction that fits their strengths and interests.

02

Fragmented & Outdated Resources

Career information is often scattered across multiple sources, outdated, or too focused on one region. This makes it hard to get accurate, personalized guidance.

03

Education–Employment Mismatch

Students often pursue education paths without understanding what careers they lead to — resulting in skill gaps, underemployment, or career dissatisfaction.

Target Audience

	Segment	Key Need	Goal	Solution Provided
	Highschool students	Clarity on career & education	Choose direction for post-secondary institution and major choice	Quiz, easy guides, visuals
	College students/new grads	Realistic entry job paths	Find first role fitting with post-secondary major and interested	Career ladder + salary tool
	Career switchers	Transition strategies	Pivot smoothly + Deeper understand about career switch	Skill matcher + fast-track paths
	Big Tech / Big 4 aspirants	Competitive edge + prep roadmap	Land top-tier job	Advanced role prep + insight

Competitor Analysis

	Personal Matching	Career path guidance	Certificate Guidance	Professional career stories	Salary data
CareerExplorer (by Sokanu)				 (Discord)	 (US-only)
Glassdoor / Indeed			 (Basic)		
LinkedIn Career Explorer / LinkedIn Learning	 (Basic)			 (Comment	
CareerCompass					

Opportunity to Growth

Personal
Discovery

1

Use AI quizzes, MBTI test, numeric number interest matching to help users discover roles

Career path
clarity

2

Build visual maps:
entry → mid → senior →
specialization

Real-life
stories

3

Include “Career
Stories” or mentor tips
from real professionals

Transition
guidance

4

Offer “pivot guides”
and skill gap checkers
for transition planning

Project Timeline and Milestones

Week 1: Research & Planning

Conduct user research and competitor analysis. Define the data structure for job roles, certifications, and salaries. Create initial sketches and sitemap.

Week 3: Prototype Development

Create low/medium-fidelity wireframes. Build the interactive quiz and integrate salary and certification tools into the prototype.

This timeline ensures steady progress from research to a fully tested and presentable prototype.

Week 2: Database & UI Foundation

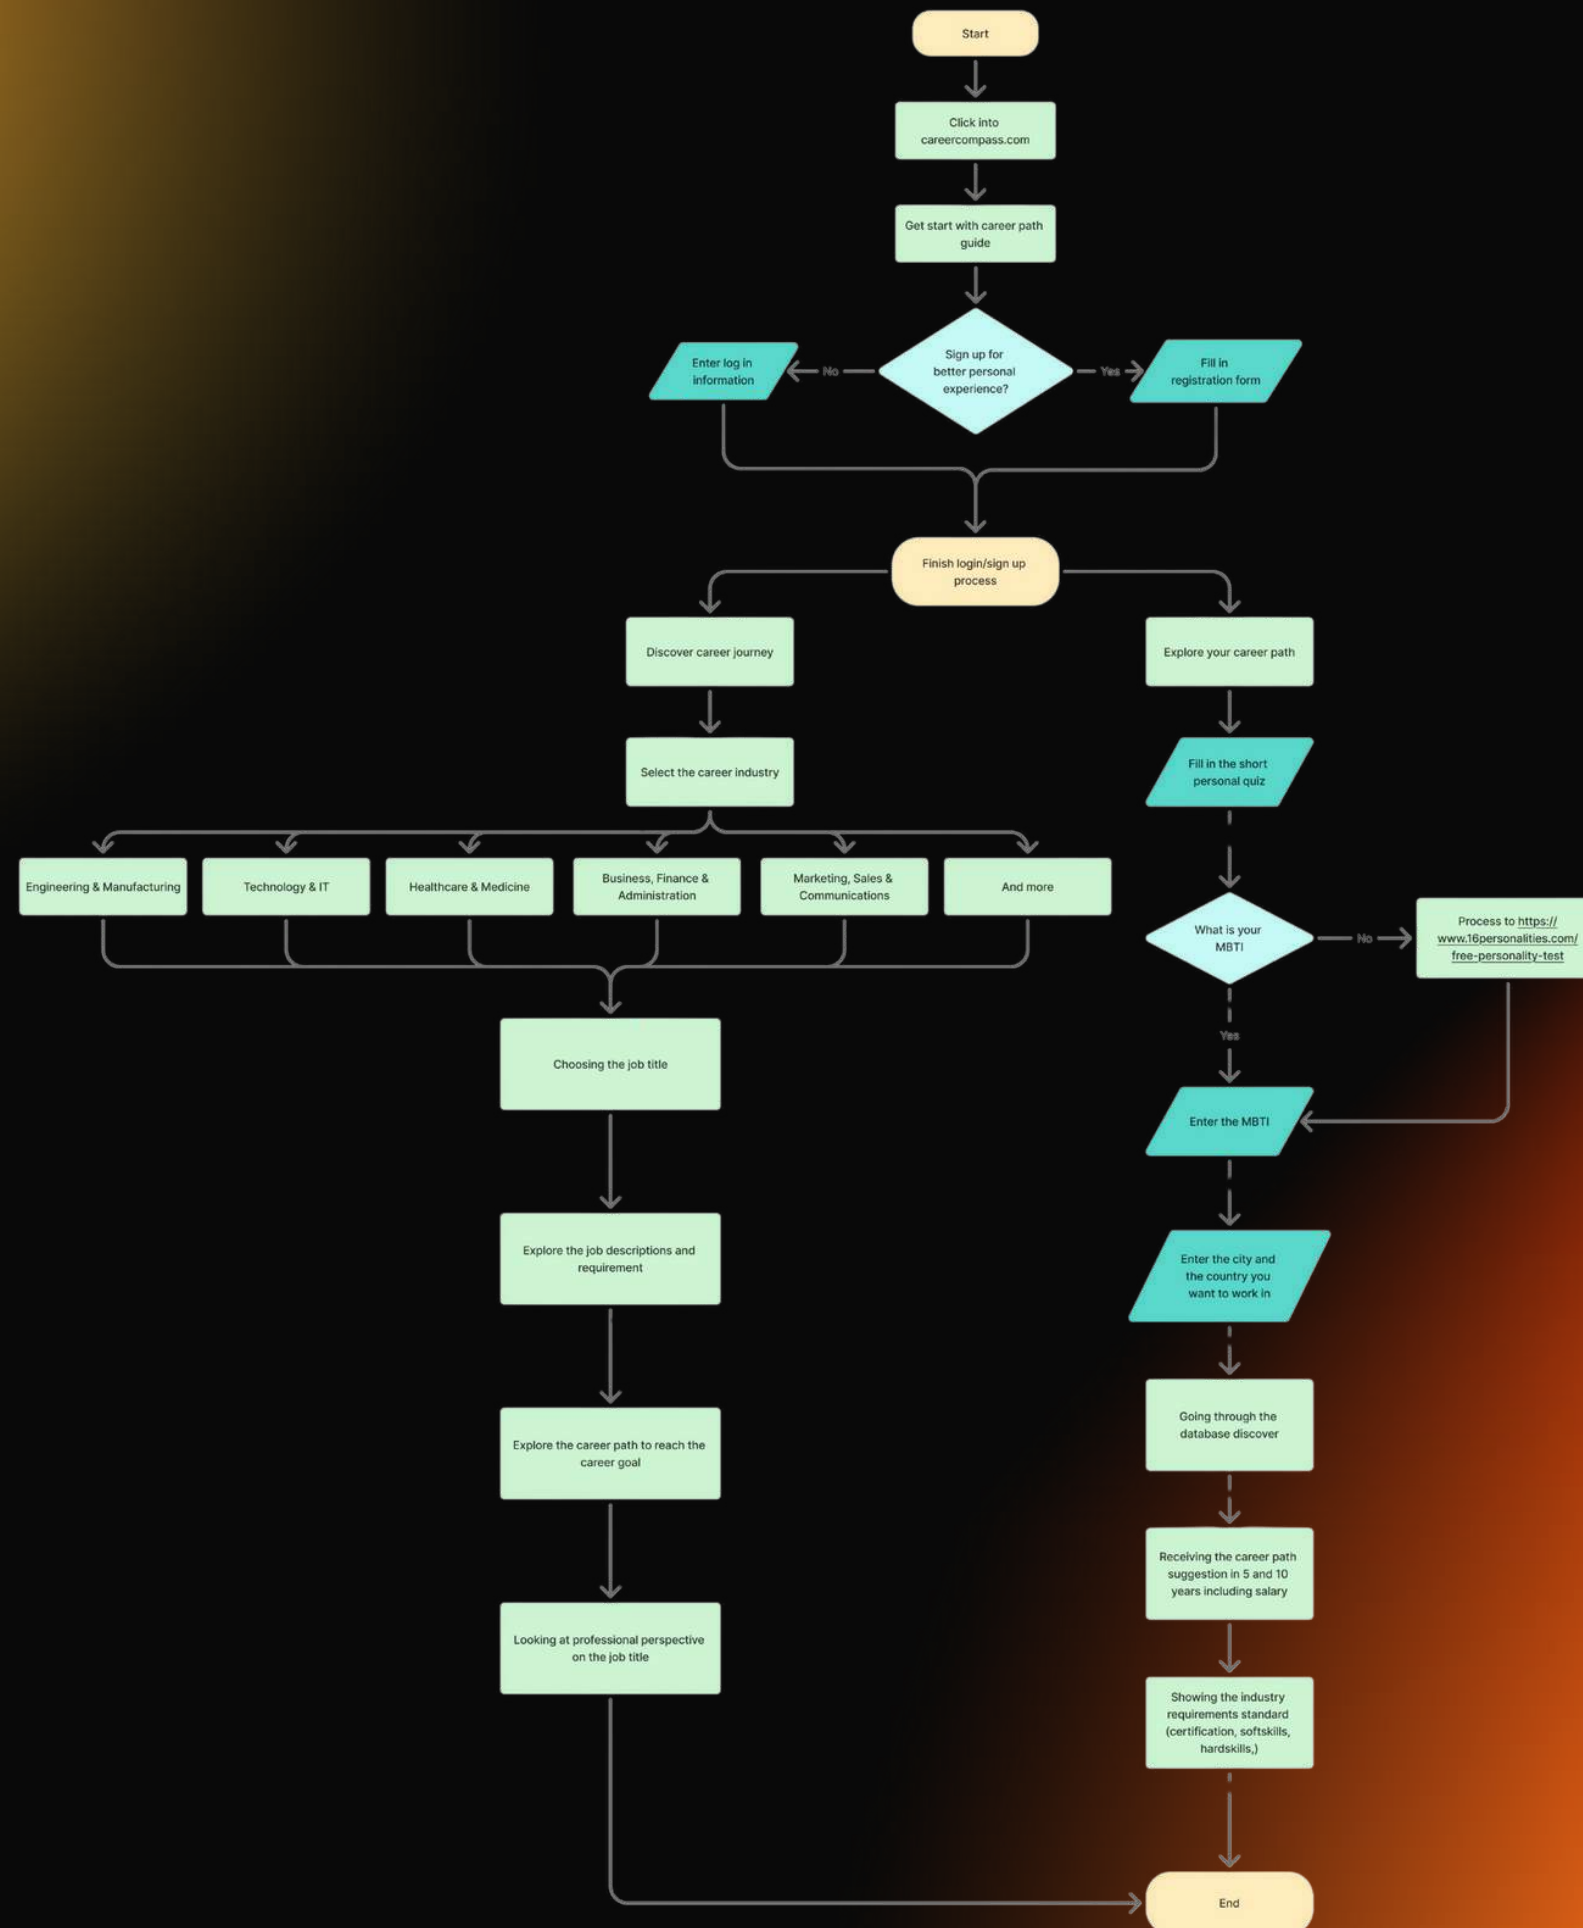

Start building the job and salary database (Canada-first). Design the homepage and quiz interface in Figma. Collect certification and employer expectation data.

Week 4: Front-End Build & Testing

Develop the front-end using HTML, CSS, or React. Conduct user testing, refine the UI, and finalize the prototype for presentation.

User Flow

This flowchart outlines the key steps a user takes when navigating the Career Compass website. From signing up and selecting their career interests, to exploring personalized job paths and accessing in-depth insights like salary data and professional advice, the process is designed to be intuitive, personalized, and data-driven.

Technical Specifications

Tools	Description	What It's For
Figma	Industry-standard UI/UX tool for wireframing, prototyping, and visual design.	Designing wireframes and UI layout
HTML & CSS	Markup and styling languages used to structure and style the frontend.	Building static pages and layout styling
JavaScript	Scripting language to enable interactivity and dynamic behavior.	Adding logic, search/filter interactions
React.js	JavaScript library for building component-based, dynamic web apps.	Managing dynamic components like quizzes
React Router	A library to handle routing between pages in a React app.	Enabling multi-page navigation
Google Fonts	Free library of web fonts for use in digital projects.	Applying modern, accessible typography

This stack supports a seamless shift from design to development.

WireFrame

A low- to medium-fidelity prototype was created in Figma to demonstrate the layout, flow, and key features of the platform. The wireframes include five core pages: Home, Assessment Quiz, Career Match Results, Career Details, and Tips/Resources. These frames focus on usability, visual hierarchy, and mobile responsiveness, serving as a clear foundation for development.
