02 COMPANY OVERVIEW

Safe Software FME

Global Leader in Spatial Data Integration

-  **25, 000 + Organizations Served**
-  **200,000 + Users**
-  **121 Countries**

Unique Value Position (USP): FME by Safe Software

The only no-code enterprise integration platform

Empowering business users to build robust data workflows and connect systems seamlessly, without writing a single line of code.

Universal Data & AI Connectivity

Seamlessly connect diverse data types to any AI system, transforming raw data into actionable, intelligent insights.

AI-Ready

Cross-System Integration

Unmatched Spatial Data Mastery

Leverage FME's unique capabilities for comprehensive spatial data interpretation, creating better location-based services.

Geospatial Intelligence

Advanced Mapping

Key Vertical Markets

02 CREATIVE MARKETING CAMPAIGN

Executive Summary

The Data Verse : Infinity Intergration

Strategic Alliance

- First B2B Technology Partnership Marvel

“The DataVerse: Infinity Integration“ : The first-ever B2B technology company to officially partner with Marvel Entertainment to create a superhero universe around enterprise data integration

Global Reach

Overcoming the Crisis

\$3.1 Trillion Data Crisis Value

- Safe Software: The Solution

Positioning Safe Software as the indispensable answer to escalating global data integration challenges.

Critical Impact

Core Concept

- Iconic Data Protector

Transform Safe Software’s existing FME character assets into Marvel-style superheroes operating from a cosmic spaceship command center , where they coordinate rescue missions to save organizations through various data disasters

Dynamic Visuals

Data Helicarrier

From our 'Data Helicarrier', we launch vital missions to rescue and integrate data across the DataVerse.

FME Manager

AI Data

Dirty Data

Legacy Data

Operational Hub

WHY SHOULD YOU RUN THIS CAMPAIGN? 🌐

Through the data research, a lot of start ups as well as large caps corporation facing with data issues.

sources by Adalo and Marketingprofs

- **Addresses Every Business Concern:** The campaign uses a series format to tackle the most urgent data problems—system integration, silos, and quality—making solutions relevant for both entrepreneurs and large enterprises.
- **Showcases Teamwork & Value:** Each FME character brings a unique superpower, working together to clean, connect, and activate data, demonstrating how Safe Software turns chaos into clarity and delivers measurable business results.
- **Drives Engagement & Trust:** By transforming complex challenges into engaging stories, the campaign builds emotional connection, educates audiences, and positions Safe Software as the go-to solution for data-driven success.

Understanding the Target Audience

Primary Customer

- Data engineers, and business decision makers in organizations of all sizes
- Government, utilities, energy, AEC, transportation, and enterprise sectors

New Potential Customers

- **Startups:** Need agile, cost-effective data solutions.
- **SMBs & Entrepreneurs:** Require scalable no-code platforms.

What kind of benefit do they want to solve for their business? *(Highlight in the campaign)*

- **Save Time:** Automate manual data tasks, reduce time spent on integration, and accelerate project delivery.
- **Save Money:** Cut costs from inefficient processes, avoid expensive integration failures, and reduce IT overhead.
- **Unlock Growth:** Enable new insights, support AI/ML initiatives, and make data accessible for smarter, faster business decisions.
- **Reduce Risk:** Ensure data quality, compliance, and future-proofing as the business grows

Marketing Funnel Channel

Marketing Funnel: Awareness Step

Engaging Content Pillars

Key Digital Channels

Maximize Reach

Paid Ads: Targeted Exposure and Attraction
Video Content

Industry Blogs: SEO-optimized blog posts and
hero origin videos on the company website

LinkedIn: Professional Networking for potential to
connect with more small cap companies and
startups

Youtube: Dynamic Video Hub and entertainment
content around how FME safe data disaster

Educate & Inform

- **Content Marketing:** Blog posts, infographics, hero stories, and downloadable guides about solving data chaos.

Hero Stories build entertaining and connection content

Captivae & Narrate

- **Video Marketing:** Animated Data Avengers creative stories, customer rescue documentaries, and AR game teasers.

Dynamic visual storytelling resonates deeply.

Captivae & Narrate

- Character Reveals & Campaign Hashtags
- Interactive Quizzes

Foster community engagement and virality.

03 CAMPAIGN TIMELINE

Campaign Timeline (18 Months)

Starting with creative development and building momentum through character reveals, interactive experiences, and real-world business impact stories

04 MOCK STORY

Scenario: “The City in Crisis – Healthcare Emergency Rescue”

The Problem:

A major city is hit by a sudden health emergency (e.g., a chemical spill, pandemic outbreak, or mass casualty event). Hospitals, ambulances, and emergency teams are overwhelmed. But the real crisis? Data silos, dirty records, and outdated systems block the flow of critical information. Paramedics can’t access patient histories, hospitals can’t coordinate, and real-time updates are missing. Lives are at risk.

Moodboard

The Data Avengers Assemble

Each Character Play a vital role in support solving the data disaster situation

FME Manager

Captain Integration

- **Mission Lead:** Receives the distress call, assembles the team, and coordinates the rescue.
- **Impact:** Breaks down data silos between hospitals, EMS, and city agencies, enabling instant collaboration.

Dirty Data

Chaos

- **Role:** Identifies and flags messy, incomplete, or error prone patient records.
- **Impact:** Cleans and validates data so paramedics and doctors get accurate, reliable information and no more wrong allergies or missing medication lists.

Legacy Data

Vintage

- **Role:** Connects old hospital databases and paper records to modern digital systems.
- **Impact:** Ensures that even patients with records in outdated formats are included in the emergency response, bridging the gap between old and new.

Real Time Data

Flash Stream

- **Role:** Streams live updates from ambulances, ERs, and field teams.
- **Impact:** Enables instant tracking of patient locations, resource availability, and evolving crisis conditions—so teams can adapt on the fly.

AI Data

Neural

- **Role:** Analyzes incoming data for patterns, predicts resource needs, and triages cases using AI.
- **Impact:** Prioritizes the most critical patients, suggests optimal transport routes, and updates dashboards for decision-makers.

The Data Avengers Assemble

Each Character Play a vital role in support solving the data disaster situation

Oracle

- **Role:** Provides context— who, what, where, when, and why for every data point.
- **Impact:** Ensures compliance, traceability, and that every action is documented for later review and improvement.

Beacon

- **Role:** Shares key information with the public, media, and non-governmental organizations.
- **Impact:** Keeps citizens informed, enables volunteers to help, and maintains transparency.

Navigator

- **Role:** Maps the crisis— showing affected zones, ambulance routes, hospital capacities, and safe evacuation paths.
- **Impact:** Optimizes logistics, reduces response times, and prevents bottlenecks.

Matrix

- **Role:** Organizes all incoming data into clear, actionable formats for dashboards and reports.
- **Impact:** Ensures leaders have the right information at the right time to make decisions.

Matrix

- **Role:** Extracts insights from field notes, social media, and emergency calls.
- **Impact:** Finds hidden patterns and urgent needs that structured data might miss.

The Rescue Sequence

1. Initial Chaos: Paramedics arrive but can't access patient histories due to siloed, dirty, and legacy data.
2. Teamwork: Captain Integration deploys the team. Chaos cleans the data, Vintage bridges old records, Flash Stream brings in real-time updates.
3. AI Power: Neural analyzes the situation, predicts surges, and helps triage.
4. Mapping: Navigator visualizes the crisis, optimizing ambulance routes and hospital assignments.
5. Transparency: Beacon shares updates with the public, reducing panic.
6. Order: Matrix organizes all data for command center dashboards.
7. Hidden Insights: Phoenix finds urgent needs from unstructured sources (e.g., social media posts about blocked roads).
8. Success: The city's emergency response is transformed—patients are treated faster, resources are used efficiently, and lives are saved.

The Impact of Each Data Type

- **Dirty Data:** Prevents fatal errors and delays.
- **Legacy Data:** Ensures no patient is left behind.
- **Real-Time Data:** Enables rapid, adaptive response.
- **AI Data:** Maximizes resource use and saves the most lives.
- **MetaData:** Guarantees accountability and learning for future crises.
- **Open Data:** Builds trust and community support.
- **Spatial Data:** Reduces confusion and speeds up logistics.
- **Structured Data:** Keeps leaders informed and in control.
- **Unstructured Data:** Surfaces hidden problems and opportunities.

IN CONCLUSION

Each data type hero has a mission critical role. Their collaboration turns a chaotic, dangerous situation into a coordinated, life-saving operation showing the true power of integrated, clean, real-time, AI-enhanced data in the real world. This is the heart of the DataVerse Avengers campaign: making data the hero in every business and public safety story.
